Cut & Trims

The crew will come and perform a cut and trim on a weekly basis or as needed. When we have completed the cut and trim, we will blow off walkways to give your lawn a professional look

Cultivating & Edging Beds

We will turn over all the soil or mulch in the beds, and then rake it level. We will also weed the beds and use a hand edger to re-form all of the garden bed edges (*Not in all cases*).

Fall Clean Up

The crew will clean all the leaves and debris off of the entire property. They will blow out all the beds and hedges and clean up the entire property. All leaves and debris will be raked up by hand and hauled away. The lawn will then be cut and trimmed one final time to leave a tidy yard.

Fall Core Aeration

Grass roots must have air (oxygen) to be healthy. When soils become compacted there is little room for air or water to be present. Under ideal conditions the soil should be composed of 50% solids, 25% air and 25% water. Core aeration removes several plugs per foot to allow air and water to enter the soil, resulting in a compaction-reducing swelling of the soil.
